WORK HISTORY

08/2021 - 08/2024

Front-End Web Developer

O.C Prod.

- I was contracted to IBM, where I worked on a significant project for Discount Tire involving the process of A/B Testing in Adobe Target.
- For the development of the A/B and XT tests, we used JavaScript, specifically utilizing the Mutation Observer API to ensure that the page updates as needed whenever there are changes
- I also used a bit of GraphQL for data querying and the Fetch API for making network requests, along with CSS and HTML for styling and structure
- In addition to coding, we organized our work using GitHub for version control, Microsoft Teams for communication with the client's team, and Jira for managing workflow and tasks.

01/2015 - 01/2021

Font-End Web Developer

Inside Media Communication | Craiova

- Building responsive websites on a custom CMS platform
- Delivering designs into pixel perfect HTML/CSS code and making sure it's cross-browser compatible
- Developing static and dynamic UI elements
- Use existing modules in our CMS platform or hand coding widgets, using JS/jQuery, for more flexibility
- Use a vast proprietary Widgets library
- Performing browser testing and debugging
- Maintaining consistency in design and layout
- Workflow involves two QA tasks per project and one client feedback task

- Implementing or updating clients change requests on existing projects
- Reporting and fixing bugs in our Widgets library
- Various animations that were created with CSS but also with jQuery
- Widgets in which I put my 'fingerprint' by modifying them so as to correspond to the client's requirements
- Sliders created with jQuery
- Various plugins.
